How to use SJR data to describe your research impact

- Make comment about how your journal ranks within your subject area, and/or subject category
- Note how your journal has improved in quartile ranking over recent years, and in one discipline more than another.
- If you were cited by an author in this journal you could comment on the spread, or inclusion of your work, in such a subject area.

Note: The SJR may change for current and previous years when extra journal content is added to Scopus. Keep a note of the date the SJR was last updated.
